TOPICS TO BE COVERED

01 Question ✓

02 Discussion ✓

Q.1

Design deterministic finite automata of set of all binary strings over $\Sigma = \{0,1\}$, where every binary string starting with 00100. How many minimum numbers of states required for above FA?

[MCQ]

A.

6

B.

5

☒ C.

7

D.

4

Q.2

How many states are required to design a minimal DFA for set of all binary strings over $\Sigma = \{0, 1\}$ where every binary string containing 0110 as a substring? ____.

[NAT]

min = 0110

$4 + 1 = 5$ states

Q.3

Which of the following is correct design of a minimal DFA for set of all strings over $\Sigma = \{a, b\}$ where every string does not start with bb? [MCQ]

A.

B.

C.

D.

Q.4

Which of the following statement is/are correct?

[MSQ]

A.

DFA is possible for every regular language. ✓

B.

DFA is also possible for some non-regular languages. ✗

C.

DFA is possible for both finite language and regular infinite language. ✓

D.

There exist only 1 (unique) DFA for every regular language. ✓

Q.5

How many states required to design a minimal DFA for $L = \{Xba \mid X \in \{a, b\}^*\}$? _____

[NAT]

$(a+b)^*ba$

$\text{min} = ba$

$\rightarrow 2+1$

$= 3 \text{ states}$

Q.6

Number of final states required to design a minimal DFA for $L =$

$\{(\epsilon + b + a)^2 \mid \Sigma = \{a, b\}\}$ is / are ____ . = 3 //

[NAT]

$\epsilon + a + b + aa + ab + ba + bb$
